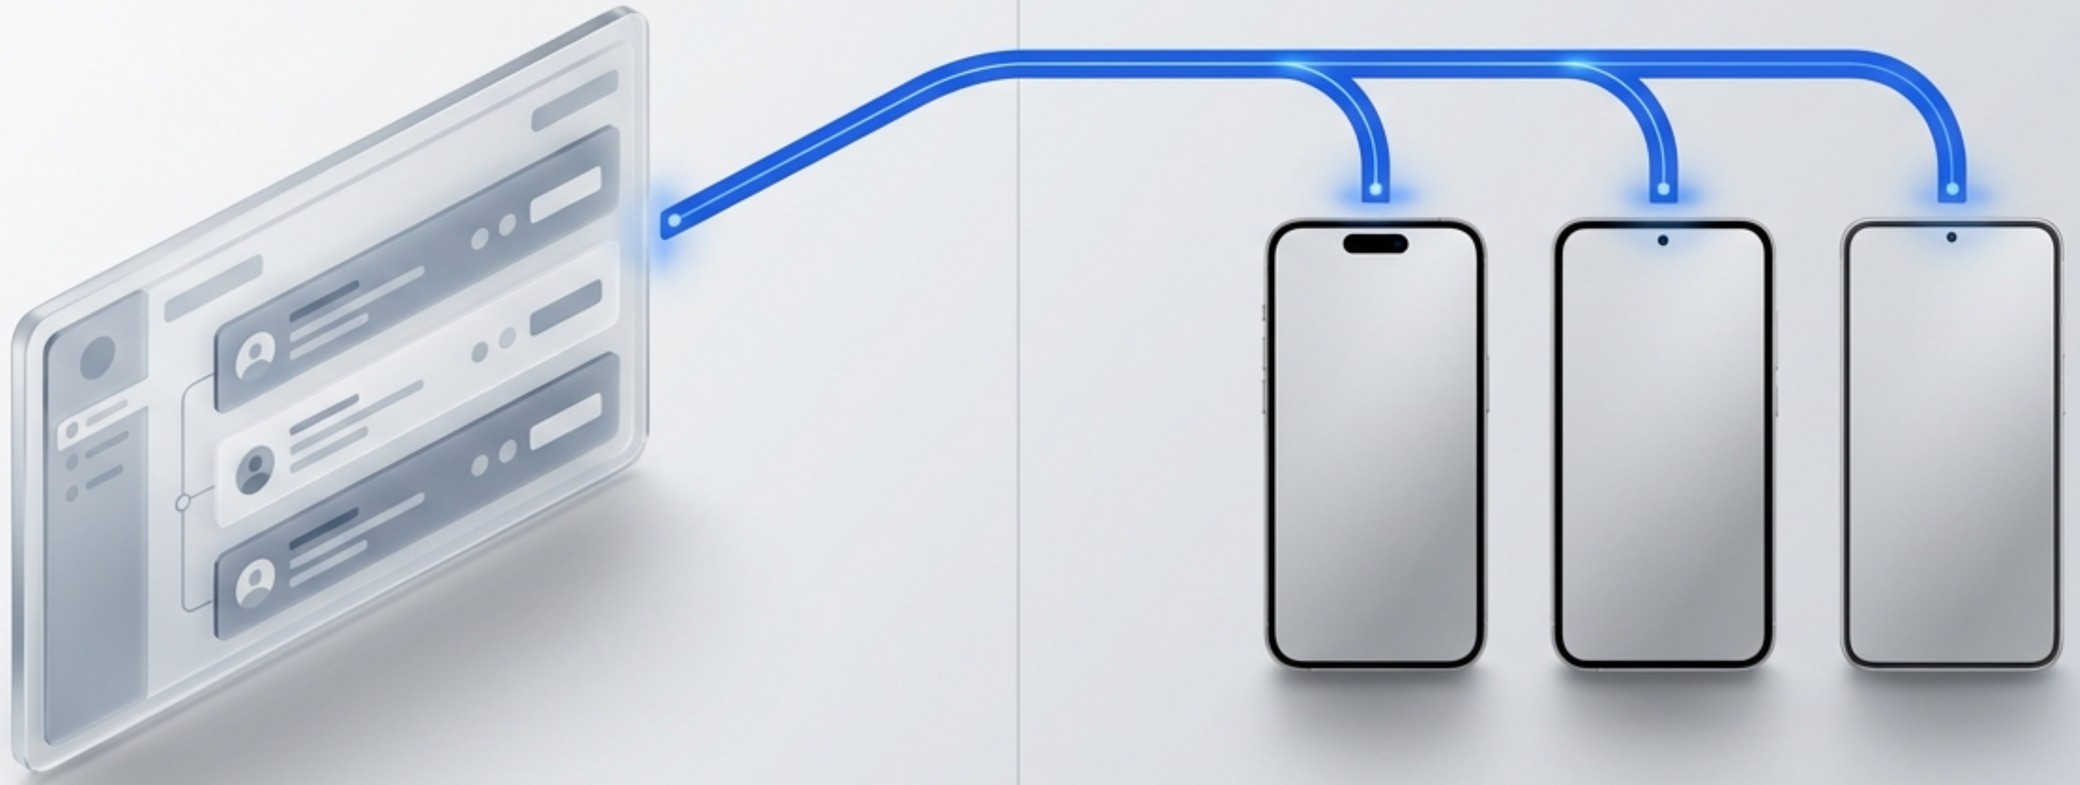
MODIVERSE

Ultimate Mobility Device Management

Transform personal devices into secure, corporate-ready assets. A cloud-based platform engineered by a local team of experts.

Total control delivered seamlessly from cloud to endpoint



The Cloud
Centralized Web Panel: Define rules, configure profiles, and establish security definitions based on user types.

The Fleet
On-Device Application: Executes configurations securely, ensuring mobile hardware aligns perfectly with organizational policy.

Built for enterprises demanding strict operational security

Data Security

Protect sensitive corporate data across all mobile endpoints with enterprise-grade encryption and remote lockdown capabilities.

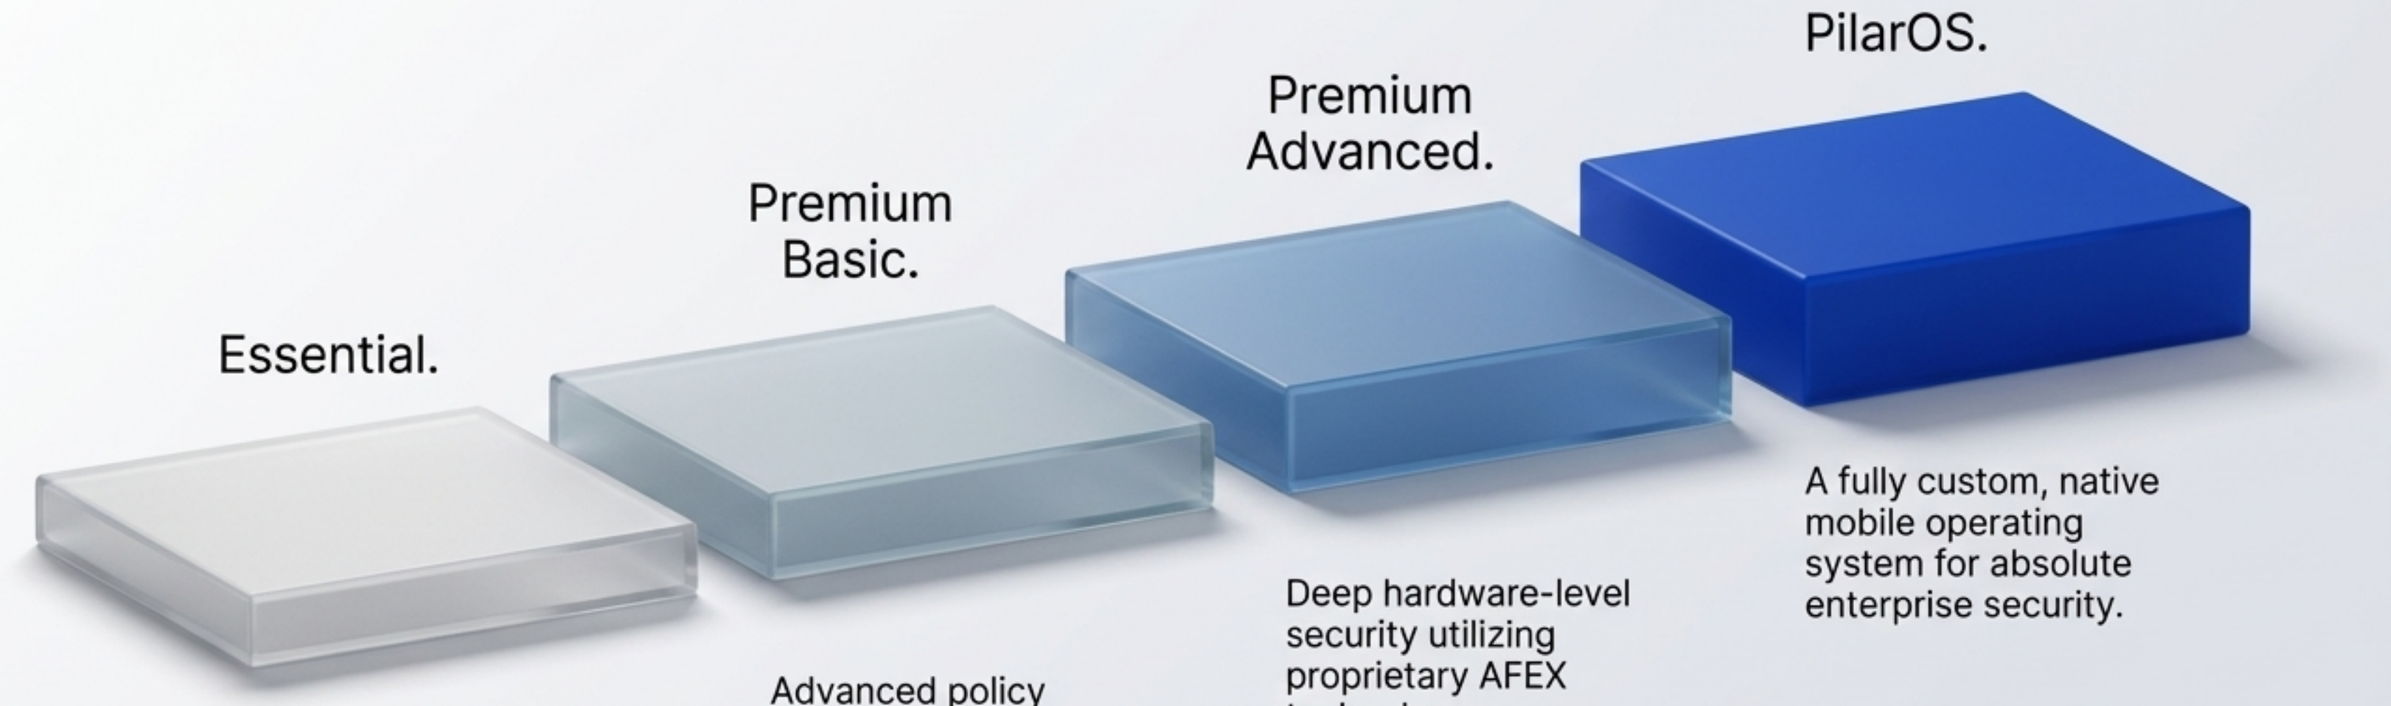
Usage Control

Restrict and monitor device usage through customized policies, ensuring hardware is utilized exclusively for business utility.

Fleet Management

Manage dozens to thousands of devices effortlessly from a single, intuitive pane of glass.

A scalable security architecture for every organizational maturity



Foundational monitoring and core control for Small to Medium Businesses.

Advanced policy enforcement for fleets of 50+ users.

Deep hardware-level security utilizing proprietary AFEX technology.

A fully custom, native mobile operating system for absolute enterprise security.

Foundational visibility and control for **growing fleets**

Live Location Tracking.

Map-based visualization of your entire device fleet in real-time.

Frictionless Onboarding.

SMS-based self-activation allows users to initialize their own devices instantly.

Remote Security.

Instant, remote lock deployment for lost or stolen devices to prevent data breach.

Bulk Communication.

Send mass operational messages across the entire fleet simultaneously.

Advanced policy enforcement and zero-touch deployment

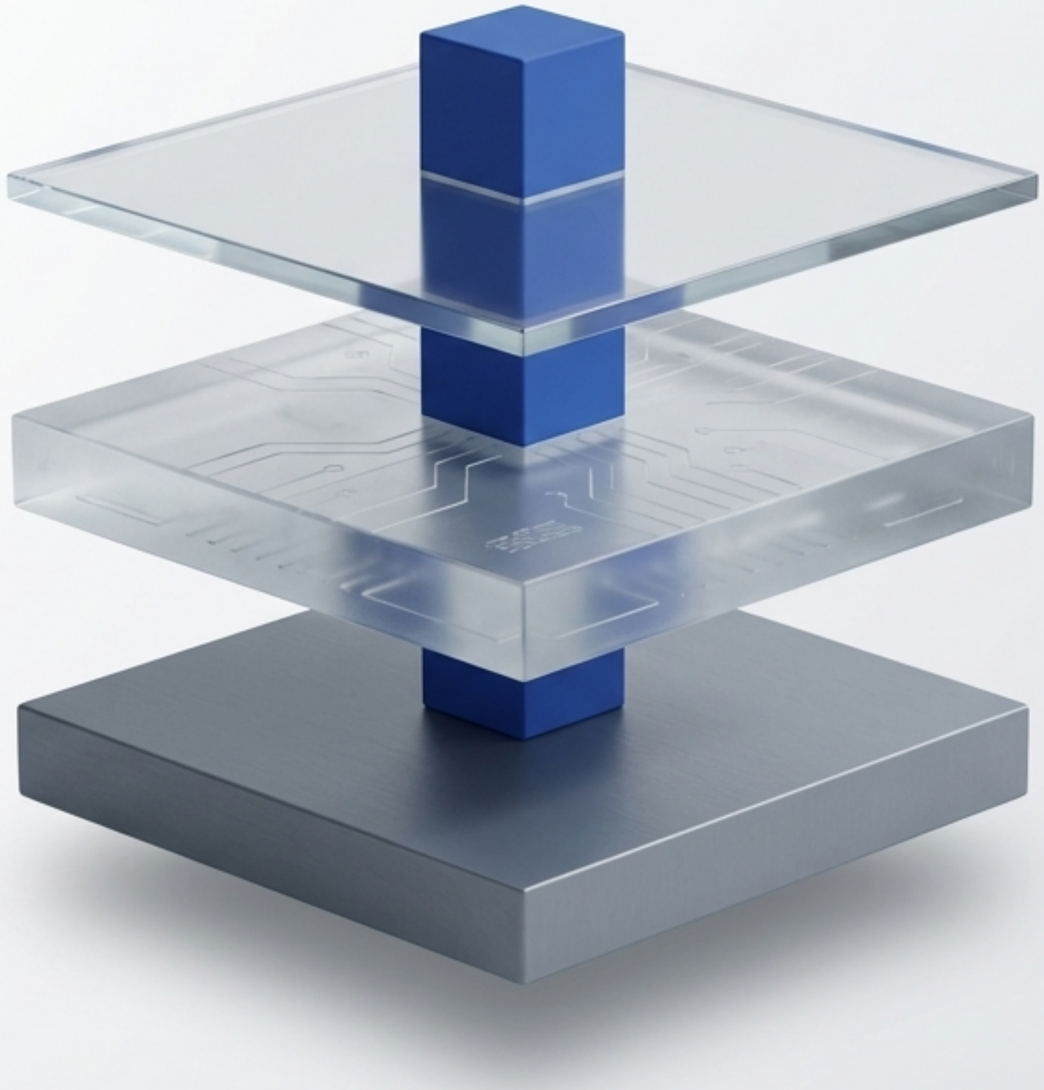
App Governance

App Governance: White/Black-listing of applications. Remote, silent application installation and background updates.

Automated Workflows

- **Contextual Security:** Geofencing capabilities that automatically trigger specific security policies based on physical location.
- **Automated Onboarding:** Zero-touch, remote automatic activation requiring zero input from the end-user.
- **Multi-Admin Architecture:** Distribute management authorities and single/bulk device setting controls across multiple IT administrators.

True device penetration extends far beyond the application layer



App Level (Essential/Basic)

Relies on the standard Modiverse App.

Operates within standard OS parameters.

Works across any Android or iOS device as long as the app is installed.

Software Agent Level (Premium Advanced)

Utilizes proprietary AFEX technology via a dedicated software agent.

Delivers deep, hardware-to-app security controls.

The management agent cannot be uninstalled by the user, guaranteelng permanent administrator access.

OS Level (PilarOS)

A natively engineered mobile operating system built from the ground up for maximum enterprise data security.

Aligning organizational needs with the right technical capability

Features	Essential	Premium Basic	Premium Advanced
